Analytical insights:

Profits for the year and total comprehensive income for the year have been conditionally formatted so that any decrease or increase flags red or green, respectively (B.1), which agrees with the stacked column (B.3) constructed from the pivot table.

There is a 3% decrease in net profit in 2023.

Other comprehensive income decreases by 12% in 2024

The sum of net profit and other comprehensive income is gradually increasing (B.3)

Profit and other comprehensive variance

An IF statement is used to measure whether financial performance increased or decreased.

The net profit decreased by 3% in 2023

Other comprehensive income increased at a decreasing rate in 2023 and in 2024 decreased by 12%

Findings

2023:

Net profit for the year 2023 decreased, on the other hand, the OCI increased. The mismatch in the net profit trend is caused by a higher tax rate, as the change in profit before tax increased for both Profit and OCI.

The other comprehensive income increased as opposed to net profit due to the significant rise in currency translation, gain on cash flow hedges, and share of OCI.

2024:

The net profit increased from 2023 to 2024 by 38%, primarily due to higher net finance income from insurance contracts.

The other comprehensive income for 2024 decreased by 12% compared to 2023, and the most significant cause is the foreign currency transaction difference and the unrealized gains on investment

Trend analysis

The net profit trendline is calculated to be 1456.1 and is gradually rising as it has a positive and strong relationship (correlation) of 0.93

The trendline for the other comprehensive income is 2318.6 and is gradually rising as well, and has a positive and strong relationship of 0.83

Predictive analysis: financial performance will continue to rise

Diagnostic analysis: Other comprehensive income items are not constant and fluctuate more than operations items
